

DAY-4

4.1 Open your own laptop or desktop (or use an online PC hardware simulator if you don't have access to a real system) and identify the GPU model installed. Write down the GPU's brand, model number, and whether it is integrated or dedicated.

Brand :- NVIDIA

MODEL :- GEFORCE RTX 3050

TYPE :- GPU

4.2 Take a clear photo or screenshot of the cooling system (fan, heatsink, or liquid cooling setup) inside your PC or from a PC hardware simulator. Label the main cooling components and briefly describe their function.

Liquid Cooler

CPU Fan :- Spins to move air through the heatsink and cool the processor.

Heatsink :- Absorbs heat from the CPU and transfers it to the airflow from the fan.

Case Fan:- Brings cool air into the case and exhausts hot air to maintain airflow.

Liquid Cooler:- Uses coolant, a pump, radiator, and fans to remove heat from the CPU more efficiently than many air coolers.

4.3 Create a comparison table listing at least 3 differences between air cooling and liquid cooling systems for GPUs, including factors like cost, efficiency, and maintenance.

Factor	Air Cooling (GPU)	Liquid Cooling (GPU)
Cost	Less expensive and more affordable	More expensive due to additional components
Cooling Efficiency	Good for normal gaming and everyday use	Better heat dissipation, especially under heavy workloads and overclocking
Maintenance	Requires occasional dust cleaning	Requires maintenance of coolant (in custom loops) and periodic inspection

4.4 Imagine you are building a gaming PC for streaming IPL matches and playing graphics-heavy games. Choose between air cooling and liquid cooling for your GPU, and justify your choice in 3-4 sentences based on your research.

I would choose air cooling for my GPU because it is affordable and provides reliable performance for gaming and streaming IPL matches. It can handle graphics-heavy games effectively when the PC has proper airflow inside the cabinet. Air cooling is also easy to install and requires very little maintenance compared to liquid cooling. Therefore, I believe air cooling is the best choice for a balanced gaming and streaming PC.
