INTRODUCATION OF NETWORKING

TASK-1

Draw a simple diagram (hand-drawn or digital) showing how your phone connects to Instagram, including your device, WiFi router, ISP, and Instagram server. Label each part and the connections.

INTRODUCATION OF NETWORKING

TASK-2

List 5 devices you use or see daily that are part of a network (for example: smartphone, smart TV, WiFi router, laptop, smartwatch). For each, write what type of network it connects to (LAN, WAN, PAN, etc.).

No.	Device	Network Type	Example / Purpose
1	**Smartphone**	**WAN / WLAN**	Connects to the internet through mobile data or Wi-Fi.
2	**Laptop**	**LAN / WAN**	Connects to a Wi-Fi network and accesses the internet.
3	**Smart TV**	**LAN / WAN**	Connects to Wi-Fi to stream YouTube, Netflix, etc.
4	**Wi-Fi Router**	**LAN / WAN**	Connects devices in the home and provides internet access.
5	**Smartwatch**	**PAN**	Connects to a smartphone using Bluetooth for data sharing.

INTRODUCATION OF NETWORKING

TASK-3

Explain the difference between the Internet and an intranet using an example from your college or a public WiFi you have used.

Internet	**Intranet**
The **Internet** is a worldwide public network accessible to everyone.	An **Intranet** is a private network used by an organization such as a college or company.
It provides access to websites like Google, Instagram, and YouTube.	It provides access only to authorized users and internal resources.
Anyone with an internet connection can use it.	Usually requires college/company login or permission.

INTRODUCATION OF NETWORKING

TASK-4

Pick any one app you use (like WhatsApp, Zomato, or Flipkart) and describe, in 4-5 lines, how data travels from your device to their server and back when you perform a search inside the app. Hint: Mention the devices and networks involved, and what happens when you hit 'search'.

Example: Zomato Search

1. When I search for a restaurant in **Zomato**, my smartphone sends the search request through **Wi-Fi/mobile data**.
2. The request goes from my phone → **Wi-Fi router/mobile network → ISP → Internet**.
3. The request reaches **Zomato's server**, where it processes the search and finds matching restaurants.
4. The server sends the search results back through the **Internet → ISP → router/mobile network → my smartphone**.
5. Finally, the Zomato app displays the restaurant results on my screen.
